Model 250 TIC

This bike will provide the youngster with a machine built to travel over rough ground and conquer those steep hills with ease. The torque-converter* provides dynamite acceleration and good top-speed with automatic clutching. The bike's straightforward construction and the use of simple components make it a groove for the mechanically inclined youngster to maintain a "clean machine".

Model 250

This model is a good bike for average riding conditions. It comes with large knobby tires which offer plenty of bite for sure-footed control in the rough. This bike also features a powerful hand-operated band brake which provides extra stopping power. A rugged #41 motorcycle chain is used to ensure trouble free hours of action. Chrome fenders and motorcycle style gas tank give this K G winner a big bike look which sets it apart from the average mini.

Model 100

This peppy little bike combines big bike features with some unique additions. This bike is equipped with a pedal-operated band brake which provides safe stopping for the youngster whose hands aren't large enough to operate a hand brake lever. Designed with the youngest riders in mind, this bike is the top of its kind.
